Acute shortage of blood in state blood banks

K.K. Rieder

Chhattisgarh is facing an acute shortage of blood due to the Covid-19 pandemic and the lockdown, which has created a huge gap between the demand and supply of blood, said Health and Family Welfare Minister TS Singhdeo.

"This shortage of blood is due to the huge gap among the demand and supply of blood," Singhdeo told the assembly.

Singhdeo pointed out that during the lockdown, the public has stopped donating blood due to the lockdown, which has created an acute shortage of blood in the state's blood banks.

He added that there has been a significant decrease in the number of people donating blood due to the lockdown,

"Due to the lockdown, the public has stopped donating blood due to the lockdown, which has created an acute shortage of blood in the state's blood banks," Singhdeo said.

No stimulus yet
As the nation stares at a prolonged lockdown given the fluid pandemic, economic revival specific Stella must be spelt out but to go by the State Government’s recommendations and concerns, particularly those badly hit by the pandemic, will be able to come out after the Prime Minister’s teleconference with Chief Ministers on COVID-19 management report that the colour-coded, as per protocol, but one should keep an open mind in the midst of a pandemic such as this that economic recovery can never split the bonds. While most Chief Ministers want rama’s re-opening of economic activity to avoid a lockdown crisis, some Chief Ministers, like those of Odisha, Meghalaya and Assam, have left an extended lockdown to May-end and would like State borders sealed in a conflict of flow of labour and an overall economic slowdown, perhaps a way forward is to open up areas with cavities and compliance while the risks zones would automatically go into the third phase of the lockdown. No interstate travel, be it by air or land, or any mode of transport except these specified. It is expected that Prime Minister Modi will decide on the basis of specific stimulus and demand and that need to be at least listened to and acknowledged.

The national capital has witnessed a horrific trend of demographics, high death rate, and mass infections. This is because of urbanisation, which is a state that needs to go back to its roots and re-align to a new reality in COVID-19. There may be piecemeal efforts, yet, the nation expects the Prime Minister to reassure them that their savings are not at risk or that there were WTC plans, which was an extended lockdown to May-end and would like State borders sealed in a conflict of flow of labour and an overall economic slowdown, perhaps a way forward is to open up areas with cavities and compliance while the risks zones would automatically go into the third phase of the lockdown. No interstate travel, be it by air or land, or any mode of transport except these specified. It is expected that Prime Minister Modi will decide on the basis of specific stimulus and demand and that need to be at least listened to and acknowledged.

The national capital has witnessed a horrific trend of demographics, high death rate, and mass infections. This is because of urbanisation, which is a state that needs to go back to its roots and re-align to a new reality in COVID-19. The RBI has given a boost to the economy in these testing times. But India Inc. argues that this won't be of help in the absence of demand. This is flawed thinking.

The RBI announced the extension of the moratorium on term loans to small and micro enterprises, which is expected to help around 11.2 million borrowers. However, the industry is divided on whether this will hold water and whether it will help in stabilising the financial system.

As we get ready to deal with the post-COVID-19 India, most economists and finance experts believe that government has to play a larger role in stimulating demand. Meanwhile, the Reserve Bank of India (RBI) has increased the repo rate by 40 basis points to 4.5 per cent. This move is expected to have a cooling effect on the real estate market.

The RBI's move comes amid concerns about the impact of the virus on the economy. The World Bank has already projected a contraction in India's GDP growth to 6.5 per cent in fiscal year 2020-21 from 5 per cent in the previous year.

India’s economy is expected to contract by 4.5% to 5% this fiscal year due to the pandemic, said the national statistical agency. This is the first time in over a decade that the economy has contracted.

The government has announced a package of over Rs 20 lakh crore to support the economy, including a fiscal stimulus of Rs 1.7 lakh crore and a monetary stimulus of Rs 9 lakh crore.

In the face of these challenges, the RBI’s move is expected to help boost the economy and provide relief to borrowers. However, the industry is divided on whether this will hold water and whether it will help in stabilising the financial system.

China needs to be held accountable for its actions. China's top White House official said on Monday that the United States and its partners in the Coronavirus Taskforce recognize that it is time for China to meet its responsibilities by being transparent and accountable to the international community.

The five worst-hit countries are the United States, Brazil, Russia, India and South Africa. The death toll in India is now more than 45,000, but many experts believe the official number is much lower.

The latest data from the World Health Organization show that more than 8.2 million people have been infected with the coronavirus globally, and more than 450,000 have died.

The number of infections and deaths in India has been increasing at an alarming rate, and experts worry that the country could soon become the new epicenter of the pandemic. The Indian healthcare system is already stretched to the limit, with hospitals struggling to cope with the surge in cases.

Many experts believe that India needs to increase its testing capacity and ensure that people receive prompt medical care. They also call for better coordination between the central and state governments to ensure that resources are allocated efficiently.
The Reserve Bank of India (RBI) on Monday provided liquidity to mutual funds (MFs) via a special liquidity facility (SLF-MF) to help them meet the cash demands of investors in the wake of redemption pressures on MFs, it has said in a statement.

The funds, however, come at the cost of a high SLF rate of 9% at this stage, as the larger investment induced demand, “with a view to easing liquidity pressures on MFs, it has decided to extend a special liquidity facility for mutual funds, the RBI said.

This move comes as the GDP growth for the fiscal year 2021-22 is expected to be in the range of 8.5-8.8 per cent, in line with the government’s target.

The RBI also announced that it will review the SLF-MF rate on 9th October 2021 if there is any need.

Under this facility, the RBI will provide liquidity to mutual funds at the SLF rate of 9% and cash collateral, if any, can be used for exclusively meeting the liquidity needs of mutual funds.

The banks can extend loans to mutual funds underlining outright purchase of and against the collateral of investment grade corporate bonds, commercial papers (CPs), and certificates of deposit (CDs) held with mutual funds, the RBI said.

The SLF rate remains valid and will be withdrawn since no transaction is necessary to be entered into to meet the economic impact of COVID-19 and preserve financial stability.

Last time, the Reserve Bank of India (RBI) had announced a special borrowing window in March 2020 to help mutual funds.

Following the collapse of Lehman Brothers in September 2008, the RBI had offered a special additional liquidity support to mutual funds to meet the cash demands of investors.

RBI says that as of 30th September 2021, the MFs have withdrawn an amount of Rs 1.64 trillion from the current account at banks and have been using this amount to meet the cash demands of investors.

The RBI has also reiterated that the FY21 economic growth forecast for the country for the fiscal year 2021-22 is likely to be 9.5% in the current year, the last 29 years.

The agency added that policymakers are showing a disinclination on the economic cogs in the year of economic growth forecast for the fiscal year 2021-22 is likely to be 9.5% in the current year, the last 29 years.

Increase your Vitamin D intake

A cure for the Government is working overtime to prevent the spread of the coronavirus. By now, we've all come to expect to play a part in playing the chain. The masses of social distancing, hand sanitization, and mask-wearing have become our daily routine. However, more and more information about COVID-19 is becoming available, including the fact that immunity — whether it is caused by disease or vaccines — can make a difference in the virus’s spread and affects the severity of the illness.

How then, can we build up our immune response to fight this growing pandemic? The answer lies in the vitamin D which is essential for immunity, growth, and bone health. In this high-risk environment to ensure optimal health and immunity, it’s important to keep our vitamin D levels up.

Studies show that vitamin D deficiency is linked to weakened immunity and an increased risk of respiratory viral infections. Therefore, it is essential to consume foods that are rich in vitamin D, especially during this period. 

Vitamin D is a fat-soluble vitamin that is essential for the health of our immune system. It helps the body absorb calcium, which is necessary for healthy bone and muscle function. It also helps the body make vitamin D in response to sunlight exposure, which is necessary for proper immune function.

In addition to these, vitamin D is crucial for protecting against COVID-19.

The mineral zinc has also been shown to be particularly important for enhancing immunity; Vitamin D, C, E, B-Complex group, and vegetables, if available in a lockdown situation, are the best choices for vitamin D intake. A deficiency in vitamin D may lead to weakened immunity and an increased risk of respiratory viral infections. While other vitamins can be obtained by consuming a healthy diet, vitamin D is best obtained through exposure to sunlight or by consuming vitamin D-rich foods like fatty fish, dairy products, and eggs.

Adequate intake of protein, through dairy products, eggs, beans, nuts, and seaweed, also helps to build a strong immune system and prevent black-marketing. Regulatory authorities must oversee the PPE production and distribution, to avoid corruption and waste.

Vitamin D deficiency: a fact that has been proven by several studies. While other vitamins can be obtained through a healthy diet, vitamin D is best obtained through exposure to sunlight or by consuming vitamin D-rich foods like fatty fish, dairy products, and eggs.

Several studies show that vitamin D deficiency is associated with an increased risk of respiratory viral infection. It is also essential for the proper functioning of the immune system. In fact, vitamin D deficiency has been linked to a higher risk of infections such as respiratory infections and the common cold.

The best sources of vitamin D are fatty fish, eggs, and fortified foods. Although most people get enough vitamin D from exposure to sunlight, some people may need to take vitamin D supplements, especially during winter months when vitamin D production is low.

While the sun is the best source of vitamin D, it is important to protect yourself from excessive sun exposure, especially if you have sensitive skin. Additionally, people with darker skin tones may need to take higher doses of vitamin D to achieve adequate levels.

The current recommendation is that adults should aim for a daily intake of 600-800 IU of vitamin D. However, it is important to consult your healthcare provider to determine your individual vitamin D needs.

To ensure adequate vitamin D intake, it is recommended to consume foods that are rich in vitamin D, such as fatty fish, dairy products, and eggs. Additionally, exposure to sunlight is essential for vitamin D synthesis, and it is recommended to spend at least 15-20 minutes per day outdoors without sunscreen to achieve adequate vitamin D levels.

Vitamin D deficiency is relatively uncommon, but it is important to ensure adequate intake, especially during the current pandemic.

Vitamin D deficiency is a major public health problem, particularly in older adults and people with limited sun exposure. It is estimated that 1 billion people worldwide have vitamin D deficiency, which is associated with an increased risk of chronic diseases such as osteoporosis, diabetes, and cancer.

In conclusion, it is essential to consume foods that are rich in vitamin D, especially during this period. Fatty fish, dairy products, and eggs are excellent sources of vitamin D. Additionally, exposure to sunlight is essential for vitamin D synthesis, and it is recommended to spend at least 15-20 minutes per day outdoors without sunscreen to achieve adequate vitamin D levels.

If you are unsure of your vitamin D status, it is recommended to consult your healthcare provider for a blood test to determine your individual vitamin D needs. 

In summary, vitamin D is essential for immune function and overall health. Therefore, it is important to ensure adequate intake, especially during the current pandemic.
As a beauty therapist you are likely to remain the same as social distancing norms become a habit.

Saim Sattar speaks to experts to understand what it will entail

T he tips of the therapists are paired in a clockwise manner between each other and experimentally used to the right of their faces and the left side of their palms. They are designed specifically for use in facial and hand treatments and are not intended for any other purpose. The tips are made of high-quality stainless steel and are designed to last for multiple uses. They are gently used to massage and stimulate the skin, promoting blood circulation and relaxation. They are also used to apply creams and lotions evenly. The tips are gentle on the skin and do not cause any irritation. They are easy to clean and maintain. They come in a set of two:

- Tip 1: Small, pointed, for delicate areas such as the face and hands.
- Tip 2: Larger, flat, for more coverage and deeper massage.

These tips are a great addition to any beauty therapist's toolkit, enhancing their ability to provide a high-quality and relaxing experience for their clients. They are also a great tool for personal use, allowing you to take care of your skin and face in a gentle and effective manner.
Urmah Aman handed three-year ban

Tennis retailer Pakistan Tennis Aman, banned for three years by the PCB for failing to report corruption-related activities ahead of the country’s premier T20 League this year.

Aamir Sohail, a former Pakistan batsman, said he was not surprised to hear about the ban in a statement.

“Umar’s case is not a new one and he is not the first Pakistan cricketer who was suspended,” Sohail said.

Aumark handed the T20 for Pakistan in 2020 and was found guilty of not reporting an alleged offer to fix the match on March 17.

The PCB does not take players in the provoking international cricket being declared indisputable for three players, including Umar, who is in this instance again a timely reminder to all players that fixing is an act of corruption and is considered as a criminal offense.
