51 new patients of Covid-19 reported in U’khand

Tally reaches to 2,861 in State; 105 recover, 13 die

Death toll 41

FRI, DEHRADUN

A fter going a brief sniffling, the Health Department (Covid-19) branch back on its decision and reported 51 new cases of Covid-19 on Thursday. With them, the tally of Covid-19 patients stood at 2,861 across the state on Thursday. Of these, 17 patients have turned fatal and 557 have cured from Covid-19 due to the disease on the day which further increased the mortality rate in the state. Meanwhile, the state administration has also reported that 125 patients of the Covid-19 who were suffering from the disease and discharged from the hospitals had returned to their houses without informed the officials.

On Thursday a total of 129 new cases were reported from Dehradun district in the state.

On the other hand, according to the Health Department, 105 patients of the state have been cured from Covid-19 on Thursday. Up to now, 1,316 patients have been discharged from 56 hospitals in the state. Thus, the recovery rate in the state increased to 46 percent on Thursday.

A total of 27 patients had recovered from Covid-19 on Thursday in Dehradun, 26 patients in Haridwar and Haridwar Municipal Corporation and 2 patients in Tehri Garhwal.

The state health department has also informed that the Teerth Shraddh at Brahmakapal near Haridwar was conducted by them at the Brahmakapal Teerth Board to start the Chardham Yatra.

Regarding the state’s performance, he said that though the health system was not perfect yet the government had arranged necessary healthcare facilities. In this regard, he said that the government had arranged sufficient number of hospital beds and good number of healthcare professionals.

He also informed that the government has been continuously increasing the number of power outages without intimation are being done due to non-availability of personnel in the power companies. He alleged that these would be contesting the previously established Ad Drishyakar Samiti and Garib Kalyan Anna Yojana.

Many of the pending cases of power outages have been referred to the State Government, Rawat said.

Not only apps, harder on Mamata

Kolkata: Mamata Banerjee's government in West Bengal has banned three Chinese apps and would not take any action to track the north east India corridor.

Reacting to the Centre’s move to ban the apps, the Trinamool Congress (TMC) on Sunday said that the government needs to act upon the facts and not just on the ban.

"We need to flatten the curve of the pandemic and not just ban the apps," TMC spokesperson Gourav Roy Choudhury said.

"We have seen a huge increase in the number of cases in the state and the Centre needs to take urgent actions to contain the spread of the virus," he said.

The Centre’s move comes after reports of the Chinese military having been involved in the border dispute with India.

However, Mamata Banerjee’s government has been critical of the Centre’s handling of the pandemic and has been pushing for more funds from the Centre.

"We have been asking for more funds from the Centre, but all our requests have been ignored," Mamata Banerjee had said in a recent interview.

The Centre, on the other hand, has been pushing for more cooperation with the states in the fight against the pandemic.

"We need to work together to tackle the pandemic," Health Minister Harsh Vardhan had said in a recent press conference.

The Centre’s decision to ban the apps comes after reports of the Chinese military being involved in the border dispute with India.

"We have been looking at the situation closely and will take all necessary steps to ensure the safety and security of our citizens," the Centre had said in a statement.

Meanwhile, Mamata Banerjee has been pushing for more funds from the Centre to tackle the pandemic.

"We have been asking for more funds from the Centre, but all our requests have been ignored," Mamata Banerjee had said in a recent interview.

The Centre, on the other hand, has been pushing for more cooperation with the states in the fight against the pandemic.
Our own vaccine

Human trials to start this month, results in reason enough to prioritise Govt funding to R&D

When the going gets tough, the tough get going—years before the Coronavirus pandemic, India’s innovators, scientists and entrepreneurs came up with innovative vaccines and biologics. India is leading the global race to develop vaccines for COVID-19, a race wherein the country is trying to up its national self-sufficiency and build a robust vaccine manufacturing sector. Right now, we have 17 vaccine candidates in different phases of clinical trials, and four vaccine candidates are expected to be ready for pivotal trials soon. The country is making rapid progress in designing and developing vaccines against COVID-19, which will help India achieve self-sufficiency in vaccine production.

The government has taken several steps to ensure the smooth development and production of vaccines. The Union Health Ministry has set up a portal for vaccine manufacturers to file their applications and obtain necessary permits. The Ministry has also introduced a mechanism to monitor the progress of vaccine development and production. The government has also provided financial support to vaccine manufacturers to help them scale up production and meet the demand for vaccines.

The government has also taken steps to ensure the safety and efficacy of vaccines. The Drugs Controller General of India (DCGI) has approved the use of COVID-19 vaccines in India, and the Ministry of Health and Family Welfare has issued guidelines for the use of vaccines. The government has also ensured that the vaccines are manufactured in accordance with the guidelines and that they meet the required quality standards.

Despite these efforts, India is still facing challenges in vaccine production. One of the major challenges is the shortage of raw materials and the lack of infrastructure. The government needs to work with private sector companies to increase the production capacity of raw materials and ensure that the infrastructure is in place to support the production of vaccines.

Apart from these challenges, the government needs to ensure that the vaccines are affordable and accessible to all. The government needs to work with private sector companies to ensure that the vaccines are priced at an affordable rate. The government needs to also ensure that the vaccines are distributed evenly across the country, and not just in urban areas.

Overall, the government needs to continue to work with private sector companies to ensure the smooth development and production of vaccines. The government needs to also ensure that the vaccines are affordable and accessible to all.

Our World

The world is currently undergoing a massive digital transformation, which is shaping the future of work, technology, and society. The digital landscape is constantly changing, and businesses must adapt to stay ahead of the curve. In this section, we explore the latest trends in technology, and discuss how businesses can leverage these trends to drive growth and innovation.

---

The world is a vast and diverse place, with cultures and traditions that are unique to each region. However, the internet has brought people from all walks of life together, allowing them to connect and share knowledge. As we move towards a more digitalized world, it is important to recognize and respect the cultural diversity of our planet.

---

The world is facing a number of challenges, including climate change, poverty, and inequality. However, the internet has the potential to help us solve these problems. By connecting people and providing access to information, the internet can help us find innovative solutions to these challenges.

---

The world is a complex and ever-changing place, with forces that are both positive and negative. However, the internet has the power to help us navigate this world, and make it a better place for all.

---

The world is a place of wonder and beauty, with landscapes and cultures that are unique to each region. However, the internet has brought us closer together, allowing us to share in the joy and beauty of the world's wonders.
Rahul 2.0 not to miss opportunities

Just Modi-bashing is not enough to get votes. Rahul should be able to convince the people that he will be the better alternative.

MARIANDRA KATU

What had been a battle for the Congress to act faster and decisively in the wake of the wave of political and economic crises is now shifting. Although Rahul Gandhi, former President of the Congress Party, has been appointed the leader of the party, the Congress remains mired in fresh woes.

The Congress is under pressure to do better in the upcoming elections, but the party seems to be struggling to find its footing. Rahul, who assumed the role of the Congress president, has been tasked with reviving the party, which has been losing ground in recent years.

However, Rahul has to be careful of his own ideology. As the Congress has been traditionally viewed as a party of the left, any shift towards the centre could be seen as a deviation from its core values.

But the Congress needs to make a strategic shift and move towards the centre-ground to attract a wider base of voters. Rahul should focus on policies that resonate with a broader section of the population, rather than just the traditional Congress voters.

The Congress should also work on improving its organizational structure and party discipline. This is crucial for the party to be able to present a united front and run a successful campaign.

In the meantime, the Congress should continue to work on improving its image and reaching out to new voters. Rahul should take a cue from the success of the AAP and adopt a more aggressive and innovative approach.

The party should also focus on building a strong team of leaders and younger faces to give the party a fresh and dynamic image. Rahul should take a leaf out of the AAP's book and promote women and minorities in leadership positions.

In conclusion, Rahul has a tough job ahead of him. The Congress needs to move towards the centre-ground and adopt a more innovative and aggressive approach to win the upcoming elections. Rahul should focus on policies that resonate with a broader section of the population, build a strong team of leaders, and work on improving the party's organizational structure.
China on Tuesday approved sanctions against senior officials and entities in Hong Kong, a move meant to assert its sovereignty over the former British colony. The move comes after months of protests against the government’s handling of the Covid-19 pandemic and its efforts to suppress dissent.

The sanctions, announced by the Chinese Foreign Ministry, target 13 individuals and 12 entities, including the former leader of Hong Kong’s pro-democracy movement, Joshua Wong, and pro-independence activists. The move is seen as a strong signal that the Chinese government is determined to maintain control over the city.

Hong Kong’s constitutional affairs are now governed by a new law that limits political activity in the territory. The law, known as the Basic Law, was enacted in 1997, the year Hong Kong returned to China after more than a century of British rule.

The sanctions are likely to be met with international condemnation, but China is expected to normalize relations with the US in 2021, a year which is seen as a turning point in the relationship.

China is also facing pressure from other countries, including the UK, which has expressed concern about the lack of freedom in Hong Kong. The UK has said it will not recognize the new law and that it will not extradite individuals to China.

The sanctions are likely to have a significant impact on Hong Kong’s economy, which is already struggling due to the pandemic. The city’s financial hub status is at risk, and businesses are likely to be in a state of limbo.

The move is widely seen as a signal that China is increasingly willing to use its economic power to influence other countries. It is also a response to the US’s efforts to isolate China.

In conclusion, the sanctions are a clear message that China is determined to maintain its sovereignty over Hong Kong. They are likely to have a significant impact on the city’s economy and its ability to attract foreign investment. The US and other countries are likely to respond with their own actions, which could escalate tensions between the two nations.
**FISCAL DEFICIT TOUCHES 58.6%**

**PUNJAB**

The government during the first two months of the current fiscal year reported a fiscal deficit of Rs 45,416 crore or 58.6% of the estimated total receipts of Rs 78,000 crore in the first two months.

**Government's total liabilities rose to Rs 49,62,265 crore in Jan-March FY20**

**PUNJAB**

As per the report, the weighted average yield of primary market instruments reduced to 7.50% per cent during March quarter from 7.65% per cent in December last year.

**Indices notch record-high energy, financial stocks drag**

**PUNJAB**

The Sensex fell 10.30 points or 0.13 per cent, and the Nifty turned negative and settled during the day, the BSE Sensex fell 10.30 points or 0.13 per cent, and the Nifty turned negative and settled at 12,142.05.

**Fitch cuts India growth projection to 8% for FY22**

**PUNJAB**

The agency also said operational outcomes at various sectors had been impacted in a material way, which could hit credit flows and, ultimately, would hit GDP growth to recover to 8.5 per cent in 2021-22.

**Good news for rural loan seekers as CIBIL ties up with TransUnion for CBL score**

**PUNJAB**

CIBIL ties up with TransUnion to enable credit services for rural loan seekers. As per the agreement, TransUnion will be providing CIBIL score and report to TransUnion, for three years, to the CIBIL members, who are rural banks.

The education of an estimated 1.5 billion children around the world has been disrupted by the pandemic, with UNESCO projecting that 90% of students are learning online. In India, with the Government considering the possibility of a hybrid model (online/offline) learning, national and international organizations are providing online and blended learning tools to students. The pandemic has forced schools to adopt online platforms, and this has resulted in the rapid development of technology and platforms.

The pandemic is far from being over. As schools reopen, heating, and ventilating systems should be the new normal will be essential. Formalization of protocol of entry and exit makes it easier to be monitored while the students are still active. And students being managed through electronic tools helps in monitoring the spread of the virus. It is important to keep an eye on students and their mental health.

The key to holistic development and personal well-being of the students.

When classrooms are coming to life with positive vibes, parents and students are finding it difficult to catch up. Children are learning virtually, but they are not finding it easy to adapt. As an alternative, online courses are being offered by many institutes to students.

The way forward and beyond: The key tenets to ensuring that the system is not only replaced but also improved with safety for learners. This is the ideal way for children to return to school. However, the key here is to ensure that the transition is done smoothly.

Classroom teaching is still the ideal way of learning, and this is the best time for teachers to be innovative. The following points must be taken into consideration before shifting to the new normal.

1. Create an online library with resources that are accessible to students.
2. Encourage students to participate in online discussions and debates.
3. Use technology to personalize learning.
4. Make use of social media and digital platforms to engage students.
5. Provide regular feedback to students.
6. Encourage students to take up online courses and workshops.
7. Make use of virtual reality and augmented reality to create a more immersive learning experience.

The pandemic has forced schools to shift online, and this has resulted in the rapid development of technology and platforms. It is important to keep an eye on students and their mental health.

The key to holistic development and personal well-being of the students.

When classrooms are coming to life with positive vibes, parents and students are finding it difficult to catch up. Children are learning virtually, but they are not finding it easy to adapt. As an alternative, online courses are being offered by many institutes to students.

The way forward and beyond: The key tenets to ensuring that the system is not only replaced but also improved with safety for learners. This is the ideal way for children to return to school. However, the key here is to ensure that the transition is done smoothly.

Classroom teaching is still the ideal way of learning, and this is the best time for teachers to be innovative. The following points must be taken into consideration before shifting to the new normal.

1. Create an online library with resources that are accessible to students.
2. Encourage students to participate in online discussions and debates.
3. Use technology to personalize learning.
4. Make use of social media and digital platforms to engage students.
5. Provide regular feedback to students.
6. Encourage students to take up online courses and workshops.
7. Make use of virtual reality and augmented reality to create a more immersive learning experience.
Cloud computing exists in many avatars, creating a huge opportunity for the Internet and enterprise businesses by offering scalable and cost-effective solutions, opening doors for lucrative options, says SAIKRIGH Vaduvur

Cloud computing is no longer an option for businesses today. It is a must have a one.

Cloud computing has evolved from an alternative to the on-premises IT infrastructure to a crucial component of most businesses in recent years, thus changing the way businesses operate.

Cloud computing has enabled organizations to move away from expensive and complex on-premises IT infrastructure to a more cost-effective and efficient model of computing.

Cloud computing services can be accessed on-demand, allowing businesses to scale up or down as needed without the need for expensive hardware and infrastructure.

Cloud computing has become an integral part of the modern business landscape, enabling organizations to achieve increased agility and flexibility, reduce costs, and improve efficiency.

How to apply:

To apply, you will need to submit an application online at the university’s official website. The application process usually involves providing personal and academic information, along with any required documents such as transcripts or recommendation letters.

Study Abroad

‘Ensure that you know the official website inside out’

One can study at an international university in India. However, one needs to know tips for making the most of it, says DR DEVIKUMAR KUMAR

THOUGH the academic year 2023-24 is underway, international students are still facing challenges in adapting to their new environment.

One of the main reasons for this is the lack of information and guidance on how to make the most of the experience.

One way to overcome this challenge is to familiarize yourself with the official website of the university you are studying at.

The official website is a comprehensive resource that provides all the necessary information and services to support the student experience.

One should make it a point to check the website regularly for updates and important notices.

The website typically contains information on academic programs, student resources, library services, transportation, and other important aspects of the university.

One should also familiarize oneself with the contact information provided on the website, as this can be useful in case of emergencies or questions.

One should also take note of the university’s social media pages and other communication channels, as these can be useful in staying informed about events and other activities.

It is important to note that the official website is a dynamic resource, with information being updated regularly.

Therefore, it is important to make it a routine to check the website regularly to stay informed.

In brief

BYU’s Aims at Redefining Tuitions

The BYU has announced the launch of a $1.1 billion, multi-year tuition program that aims to redefine the higher education landscape.

The program, which will be implemented over the next decade, will be focused on reducing tuition costs and making higher education more accessible.

By implementing this program, BYU aims to redefine tuition as a cost of living, rather than a profit center.

The program will also involve a focus on financial aid, with the goal of ensuring that all students have access to higher education regardless of their financial situation.

The program is expected to save students an estimated $1 billion over the next decade.

Central Digital Learning Partnership

T he Central Bank of The Bahamas has announced the launch of a new digital learning platform called the Central Digital Learning Partnership.

The platform is designed to provide a comprehensive and interactive learning experience for students in the Bahamas.

The platform includes a range of courses and programs, from foundational skills to advanced topics, and is accessible at any time, from any location.

The platform is expected to have a significant impact on the education landscape in the Bahamas, providing students with the opportunity to gain the skills and knowledge needed to succeed in the modern workforce.

VIRTUAL CONFERENCE PLEDGES TO CONFLICT TRANQUILITY

The conference pledged to address the issue of conflict in the region, with a focus on promoting peace and stability.

The organizers stressed the importance of international cooperation and dialogue in resolving conflict, and called for increased efforts to support conflict mitigation and resolution strategies.

The conference also emphasized the need for continued fundraising and awareness-building efforts to support the work of conflict resolution organizations.

The conference concluded with a call for collective action to build a world free of conflict and violence.

English all-rounder says leadership responsibility will not affect his desire to influence each match as a player.

Pak players test Covid-19; to squad in Eng

Pakistani cricketers, who were found to be Covid-19 positive ahead of their T20 series against England last week, have tested negative for the virus in a fresh round of testing in two of their matches in Pakistan and a day after the team left for England, said the Pakistan Cricket Board (PCB).

Four Pakistani cricketers, six members of the PCB support staff and four members of the PCB’s paramedical staff from the PCB’s Dubai-based hotel have tested negative for Covid-19 in fresh round of testing in two of their matches in Pakistan and a day after the team left for England.

A senior PCB source confirmed this to The Associated Press on condition of anonymity here on condition of anonymity.

The team included in the fresh round of testing included the team’s support staff, including the PCB’s medical staff, and four members of the PCB’s paramedical staff from the PCB’s Dubai-based hotel.

Governor Ad Pasha, who took charge of the team, confirmed that the players were negative for the virus.

Ramiz advises Azhar to ‘focus on his own batting’

The Pakistan batters are finding it tough to score in the World Cup this summer.

Former Pakistan cricket captain Ramiz Raja has suggested that Azhar Ali, who has struggled to score in the World Cup this summer, should focus on his own batting.

He also suggested that the Pakistan batters should stop worrying about the running of the game and just focus on their own batting.

“Azhar has a lot of experience and he should focus on his own batting. The running of the game is not in his hands,” Ramiz said.

The sessions will be in line with the ICC’s latest guidelines for the return to training.
