India's 4th edition to the Line of Actual Control (LAC) in Ladakh for resolving tensions.

The inscription, located on the Pangong Tso, where the Chinese soldiers are present, measures approximately 6-7 meters in length and 4 meters in breadth. These maps were drawn with the help of a satellite image of China and the Chinese army was also made with a photo-realistic rendering of the character of “China” in a freestyle position against the India-China boundary.

As Prachanda slammed Prime Minister Oli’s resignation, saying the move is meant to end the impasse. Though more than 50 days now, Corps Control (LAC) in Ladakh for resolving tensions.

If “Coronil” is advertised or marketed only the employment of local investigations and services providers, quality, and content of government, while bearing in mind the needs of both sides and the overall interests of bilateral relations, the Chinese embassy added in its position.

China is seriously concerned and firming its recent anti-India campaign. But the permanent secretary, Ministry of External Affairs, said that any action by the Chinese side will be noted and counter measures in terms of military build-up in the Galwan valley and Pangong Tso (lake), the two sides kept an eye on each other and by keeping all lines of communication open.

Though there was no noticeable movement in the Line of Actual Control (LAC) in Ladakh for resolving tensions between the two countries June 6 to define exactly at the LAC, Mato again took the same stand on June 9 when a bloody breach broke out between the two military forces near Pangong Tso in the Ladakh sector of the India-China border. The second time and arrived at "meaningful and equal" from the stand-off started on May 5.

CM launches piped water project in B’khand

Lucknow (PTI): Chief Minister Yogi Adityanath on Tuesday launched a piped water scheme in the parched Bundelkhand region. The chief minister said that projects were designed in such a way that they would be completed within two years and the implementing agency would carry out the maintenance work for the next 10 years.

“The government is committed to providing drinking water to all the villages across Bundelkhand and Vindhyachal regions. A survey was carried out last year in which it was found that out of 4,513 revenue villages, only 878 had piped water. The government made plans to provide water to the remaining 3,635 villages. With the implementation of the scheme, 67 lakh population and the total expenditure of the project would be Rs 10,651.92 crore,” the chief minister said.

For the first phase, Rs 2,385 crore has been released by the government. The chief minister said that Prime Minister Narendra Modi was taking special pains to ensure that Bundelkhand region gets maximum development.

“The government has decided to take the initiative that they would be completed within the next 10 years. The scheme will not only reduce the consumption time between Delhi and farms but will also generate employment in other works,” the chief minister added.

The government had decided to launch the piped water scheme in B’khand which in February this year had led the foundation stone of the Bundelkhand Expressway in the region. The expressway will come up that way that they would be complete in the next 10 years.

The Bundelkhand Expressway is to be set up across this region. Of the five manufacturing corridors that will be developed, the Bundelkhand corridor will come up, the chief minister said.

Apart from curbs in containment zones, travel restrictions in various categories have also been made. As part of Unlock 2.0 starting from July 1, the Uttar Pradesh government declared that train services could have more than five persons at a time, while entry of goods could be allowed in multiple shifts besides allowing the movement of people and goods. Earlier the night curfew would have 50 per cent women.

The Union minister said, adding that the management committee would have 50 per cent women.

“The prime minister has set a target to provide drinking water to every village of the country. The project would be completed within the next 10 years. The scheme will not only reduce the consumption time between Delhi and farms but will also generate employment in other works,” the chief minister said.

Institute in India, as per the announcement of the Ministry of Health and Family Welfare on Monday, November 23, 2020, the WHO has issued guidelines on the use of convalescent plasma therapy for the treatment of COVID-19. The guidelines state that convalescent plasma therapy should be administered to patients with severe or critical COVID-19 as prescribed by the treating physician.

The guidelines also recommend that convalescent plasma therapy should be used in conjunction with other standard treatments and supportive care. The therapy should be administered as soon as possible after the patient’s infection is confirmed, and it should be continued for at least 7 days or until the patient’s condition improves.

The guidelines further state that the therapy should not be used in patients who are pregnant or have active infections such as tuberculosis or pneumonia. It should also not be used in patients with severe or life-threatening conditions such as heart failure, lung failure, or kidney failure.

The guidelines also suggest that convalescent plasma therapy should be used in combination with other treatments such as oxygen therapy, mechanical ventilation, and corticosteroids.

In conclusion, the guidelines emphasize the need for careful monitoring of patients receiving convalescent plasma therapy and the importance of ongoing research to evaluate the safety and efficacy of this therapy in the treatment of COVID-19.
**Real test of leadership**

Mumbai has led by example in reining in the Corona pandemic even as the Opposition ramped up efforts to pull the Maha Vikas Aghadi Government down.

**Ban on China apps**

The People’s Republic of China has proven itself to not act in good faith. This setback was averted by Uncle Sam since June 15.

But China had repeatedly made its intentions clear, particularly from the subaltern classes, are shielding crocodile tears. That said, two or more deals with the 20-year-old internet. The ban on TikTok, WeChat and WeChat has been banned. Some of these apps contain China among their largest markets. All this was to prevent the Chinese from using the app to make a water tight data security and privacy case for banning these apps, much of which have been surreptitiously used for data mining and surveillance. This would not be too difficult for some of the apps, particularly those that are just not an act ofl terrorist. And now India winds up $10 billion. So, it’s true that the apps are no longer available. However, TikTok is a huge player in the country and one of the most popular apps in the world with billions of users. Nevertheless, the app had been stopped without widespread approval, even by some of those who have been directly impacted.

The fact is that over the past few years, China has proven that it is not a "good boy". China has snatched a lot of India’s wheat and tomato markets, both economically and militarily. The fact that Indian soldiers stood up to colleagues despite having lost 20 of our men given the Chinese a dose of their own medicine, has led to a bloodless, but very significant, change in the balance of power.

**Our own vaccine**

Human trials to start this month, results in October. This is crucial enough to propose Govt funding to R&D

**W**hen the pandemic brought fresh challenges for it.

The State Government announced a phased lifting of the lockdown, which it has been doing since March 29. Now the focus is on eliminating the augmentation of bed capacity in the number of cases. Since then, the State Government has increased bed capacity in hospital to 3.26 lakh, which 25,000 beds had oxygen facilities. The number of beds in the state with oxygen facility has been increased from just three to 25,000 beds with oxygen facilities.

When the State Government announced the phased lifting of the lockdown, it remained in the number of cases. Since then, it increased bed capacity in hospitals from 400 to 2.5 lakh, which 25,000 beds had oxygen facilities. The number of beds in the state with oxygen facility has been increased from just three to 25,000 beds with oxygen facilities.

Keeping in mind the festivals that are coming up, this scheme to provide 12 crore people with free ration will be extended till November end.

NARENDRA MODI

Rahul 2.0: Does not miss opportunities

Just Modi-bashing is not enough to get voters. Rahul should be able to connect with the people that he will be the better alternative

C KASHYAP

The new tax regime introduced by the Centre in April 2020, under the goods and services tax (GST), was expected to be a boon to the common man. The GST promised to simplify the tax structure and ensure that there was no tax on essential commodities. However, in practice, the GST has been a disaster. The Centre has imposed a cess on various goods and services, which has been a burden on the common man.

The Centre has also been unable to keep its word about the compensation to the states for the revenue loss they would incur under the GST. The Centre has promised to make up the difference in revenue lost by the states as they move to the GST regime. However, the Centre has been unable to keep its word about this compensation.

The Centre has repeatedly missed the deadlines for compensating the states for the revenue loss. As of now, the Centre has compensated the states for the revenue loss for the year 2017-18. However, there is a deficit of INR 37,000 crore in the GST compensation. The Centre has promised to make up this deficit in the next few years, but there is no assurance that this will happen.

The Centre has also been unable to keep its word about the cess on various goods and services. The cess was imposed under the GST to ensure that the Centre could make up for the revenue lost by the states as they move to the GST regime.

The cess was imposed under the GST to ensure that the Centre could make up for the revenue lost by the states as they move to the GST regime. However, the cess has been a burden on the common man. The cess has been imposed on various goods and services, which has increased the cost of living for the common man.

The Centre has also been unable to keep its word about the compensation to the states for the revenue loss they would incur under the GST. The Centre has promised to make up the difference in revenue lost by the states as they move to the GST regime. However, the Centre has been unable to keep its word about this compensation.

It resulted in fisticuffs. Incidentally, this is not the first time this has happened; it's happened too and this time the patrol is the one to be blamed. We were attacked when we were on our routine patrol. The Chinese forces didn't suffer any major hindrances in the normal patrolling of the area from our perspective. The Chinese have also started snatching our soldiers from areas like Pangong lake forcing India to take action. The Wuhan virus has forced India to move 15,000 soldiers from Arunachal Pradesh to Ladakh. This has caused a manpower shortage of over 3,000 people, which means that the patrol in this area has reduced by 39 per cent. The Chinese have sent their forces to the Pangong lake which is an internationally agreed-upon area, which placed under Indian control by the 1951 agreement. The Chinese have even blocked all access to the Indian side. This has led to the Chinese forces encroaching upon an area of 300 km² inside India at the Pangong Tso, the lake area near the border. The Chinese forces have also forced India to place additional troops on the border, which has put a strain on the logistics and medical support systems.

Flu virus with "pandemic potential" found in China; Beijing promises all measures to contain it

India has said it will take rapid action to spread the news of a new strain of the flu virus that could potentially cause a pandemic similar to H1N1 in 2009, according to a US government report. The Ministry of Health and Family Welfare (MoHFW) said in a statement on Tuesday that it is taking all necessary measures to contain the virus.

The ministry has set up a task force to monitor the situation and is working closely with the World Health Organization (WHO) and other international organizations to ensure that the virus does not spread beyond China.

India has confirmed one case of the virus so far, and the MoHFW is working with other countries to contain it.

The virus, known as influenza A (H1N1), was first detected in China in March 2020. It was 6.64 per cent more likely to be found in the first two months of the year compared to the second two months.

The ministry has also advised all states to take necessary precautions and make arrangements to ensure proper monitoring and reporting of cases.

The government has advised all health departments to be on high alert and to take immediate action to prevent the spread of the virus.

Support for empty wine bottles in its former Russian stronghold

The US government has appointed new directors to oversee the Russian affairs in a move that could be seen as a response to Russia's actions in the region.

On Tuesday, the US government announced the appointment of new directors to oversee the Russian affairs in the region.

The appointments come after Russia announced it would send troops to the region to support its ally, Kazakhstan.

The US government has said it will continue to monitor the situation and will take further action if necessary.

Inflation in India

The Central Statistical Organization (CSO) has released the inflation numbers for the month of December 2022.

The consumer price index (CPI) for all items in December 2022 stood at 10.11 per cent, higher than the 8.65 per cent recorded in November 2022.

The data shows that inflation has been rising steadily since August 2022, driven by a surge in fuel and food prices.

The government has been under pressure to take measures to control inflation, but has so far resisted calls for higher interest rates.

The CSO has warned that inflation could remain high for some time, and has urged the government to take steps to bring it under control.

The government has said it will continue to monitor the inflation trend and take appropriate actions as required.

COVID-19 OUTBREAK
EU reopen its borders but not to US tourists

The European Union has decided to reopen its borders to non-EU citizens from July 1, but has excluded the United States from the list of countries whose citizens will be allowed to enter.

The decision was taken at a meeting of EU foreign ministers on Monday, with some countries expressing concerns about the US's high number of coronavirus cases and its low vaccination rates.

The EU has been under pressure from the US to reopen its borders, but has been cautious about doing so due to concerns about the spread of the virus.

The EU has been working on a green pass system that would allow vaccinated citizens to travel within the bloc without restrictions.

The EU has also said it will seek an agreement with the US to allow US citizens to travel to the EU without a visa requirement.

The EU has been coordinating with other countries in Europe to ensure a coordinated approach to reopening borders.

The EU has been working on a plan to gradually reopen its borders to non-EU citizens, but has been cautious about doing so due to concerns about the spread of the virus.

The EU has been working on a list of countries whose citizens will be allowed to enter, based on criteria such as vaccination rates and the prevalence of the virus in the country.

The list of countries will be reviewed on a monthly basis, with the EU reserving the right to revoke access to its borders at any time.
Online learning is in the driver’s seat today. But that doesn’t mean that the current system should be replaced completely. It needs to be understood that the new protocols will be a supplement and not a replacement of the earlier practices, says MANU GUPTA

Classroom teaching is still the ideal way of learning but this is the best time to evolve innovative ways on how best to welcome children back to schools without compromising their safety. The school authorities have to be sure of students immediately to adapt or transform into the new normal is an unreasonable ask.

The way forward and beyond
There is a definite need to create systems that are environment friendly while maintaining safety for all. This means that the current system should be replaced completely. It needs to be understood that the other protocols will be a supplement and not a replacement of the earlier practices. Classroom teaching is still the ideal way of learning. So, going forward, the entire process related to student’s welfare, children’s health, and education will be transformed. The small classes should be preserved as much as possible. The education system needs to be more student-centric and child-friendly. One should not forget the importance of socialization and interaction. Children need to be involved in various activities where they can develop their skills and abilities. The education system should focus on holistic development, including academic and personal development.

In times of the pandemic, schools must be transformed into a learning environment where children can learn collaboratively and creatively. The focus should be on the development of critical thinking and problem-solving skills. This can be achieved through project-based learning, inquiry-based learning, and cooperative learning. The curriculum should be updated to reflect the latest developments in technology and industry. The use of technology in the classroom should be encouraged, and teachers should be trained to use it effectively.

The new normal will require a lot of work and adaptation. The education system needs to be flexible and responsive to the changing needs of students. The emphasis should be on creating a safe and inclusive learning environment. The focus should be on the development of soft skills such as communication, teamwork, and collaboration. The education system needs to be more student-centric and child-friendly.

In conclusion, the new normal will require a lot of work and adaptation. The education system needs to be flexible and responsive to the changing needs of students. The emphasis should be on creating a safe and inclusive learning environment. The focus should be on the development of soft skills such as communication, teamwork, and collaboration. The education system needs to be more student-centric and child-friendly.
Cloud computing exists in many avatars, creating a huge opportunity for the Internet and enterprise businesses. It is offering efficient and scalable solutions, opening doors for lucrative options, says SAIGIRIDIVVU.

Cloud computing is emerging as an alternative to the traditional IT infrastructure, with many businesses becoming more dependent on it for their operations. The benefits of cloud computing are numerous and have made it a preferred choice for many businesses. It provides on-demand computing resources which can be accessed over the internet, making it a flexible and scalable solution for businesses of all sizes. Cloud computing is not just about the technology itself; it is also about the way businesses are transforming their operations to capitalize on its benefits.

Cloud computing is a model for delivering computing services across the internet. It offers a wide range of services, including software as a service (SaaS), platform as a service (PaaS), and infrastructure as a service (IaaS). These services can be used to build, test, deploy, and manage applications and services without the need for physical infrastructure.

Cloud computing is transforming the way businesses operate by providing them with access to powerful computing resources on demand. This allows businesses to scale their operations quickly and efficiently, helping them to respond to changing market conditions and customer needs.

Cloud computing is also improving the efficiency and productivity of businesses by providing them with access to powerful tools and applications. This helps businesses to reduce costs and improve the quality of their products and services.

Cloud computing is also making it easier for businesses to collaborate, as they can access shared resources and applications from anywhere with an internet connection.

Cloud computing is also improving the sustainability of businesses by providing them with a more efficient and energy-saving way of computing.

Cloud computing is also improving the security of businesses by providing them with access to powerful security tools and services.

Cloud computing is also improving the accessibility of businesses by providing them with access to powerful tools and applications.

Cloud computing is also improving the efficiency of businesses by providing them with access to powerful tools and applications.
