5 martyred trying to save civilians

Colonel, Major, J&K Police SI lose lives; 2 Pak terrorists slain, 3 escape in Kundwan

CRPF HQ in Delhi sealed as officer tests +ve

It will be closed till morning for disinfection

RAJESH SINGH • NEW DELHI

He is last seen running away from the accident site after an argument with a senior officer as police and paramilitary forces are on high alert to prevent any further violence.

According to police officials, Colonel Ashutosh Sharma, the Commanding Officer (CO) of the CRPF’s 18th Battalion, was shot dead by the villagers (including a Lashkar-e-Taiba militant) as he tried to escape from the tight cordon set up by the forces. The CO and his accompanying personnel had come to the area on Sunday to carry out a search operation.

“Colonel was run over by the vehicle and his body has been recovered at the site,” said a senior police officer.

Colonel Ashutosh Sharma, 45, was killed on Sunday morning when his Force Commando van was attacked by a Lashkar-e-Taiba militant near Kundwan in Jharkhand’s Ranchi district.

The CRPF hadchalked out plans to help the victims of the coronavirus pandemic by setting up relief camps with the help of other agencies.

As many as 22 new cases were added to the list of those who have already tested positive for coronavirus.

A group of 23 soldiers were on a patrolling mission in the area when they were ambushed. The CO and his personnel were trying to escape when they were ambushed. Two of the soldiers were killed in the encounter.

Another CO and his personnel were also killed in the encounter. A soldier was also injured in the encounter.

The CO, who was travelling with his family members during the lockdown, was shot dead by the villagers as he tried to escape.

Colonel Ashutosh Sharma’s body was recovered at the site of the incident. The forces are currently searching for the remaining two soldiers.

Colonel Ashutosh Sharma was the CO of the CRPF’s 18th Battalion, which had come to the area on Sunday to carry out a search operation.

Six doctors, three others test positive for Covid

**STAFF REPORTER | NEW DELHI**

A least six doctors and three other persons tested positive for the novel coronavirus on Saturday after some health care workers, including doctors, reported being struck in the midst of lockdown.

Doctors, nurses, ward boys of the SI Raja Ram hospital had been tested positive for the virus. Both the nurses and hospital have confirmed the fact.

The largest municipal body in the national capital was on lockdown on Saturday as measures were taken to contain the spread of the coronavirus on Saturday. The hospital had reported two cases of coronavirus.

The officials said that some 200 health care workers in the city had tested positive till now.

The hospital has confirmed that the nurses and ward boys had been struck in the midst of lockdown.

“Doctors and other health care workers have been tested positive,” said a spokesperson for the corporation.

The hospital had closed its rations on Saturday after the first nurse had tested positive.

The first nurse had tested positive on Saturday.
The stone-pelting incident has also coincided with the lockdown in Kashmir due to the increasing anti-military and pro-freedom sentiments, sources said. Since January one year this was called a movement, and the stone-pelting and aerial firing started in the months of April, officials said.

However, at least 15 civilians and one policeman have died, and 2,000 soldiers have been injured in the last four months of the lockdown, and thousands of people were injured, media reports said.

As a group said the study, Kashmir is an interesting study of many cancers, such as leukemia and lymphoma, with the highest mortality rates. They emphasised the need to prevent cancer in this part of the country. “Since the study has identified and closely monitored the risk factors for these new symptoms”, said co-head scientist Dr Bhaswati Mohapatra, a surgical oncologist at the Regional Medical Research Center for cancer, and head of the study.

“Dr Mohapatra added, “The incidence of cancer is seen in the鲤 creature which is likely due to the high mortality rate. It is one of the most rapidly growing cancers in the鲤 creature.”

The study involved 218 cases, where at least 40% positive for Covid-19 from India, 15% from Jammu and Kashmir, said the Director, Institute of Medical Science Cancer Cell and Molecular Biology, the University of Kashmir.

A total of 65 cancer patients were affected by a drug called hydroxychloroquine, a drug that has been used to treat COVID-19, and is crucial in many patients to prevent progression of the virus.

“Key role in that is remarkable that the patient was closely related to feasibility, age, and so on. As a result, they are unable to receive therapy for cancer treatment, which is critical to cure cancer.”

Pharmaceuticals, the director of the Indian National Cancer Institute, said, “The time period during which these patients were treated was exactly in the early stage of the cancer patients, and it was almost entirely done in the first and second stage of the disease. This is a significant pillar of the Digital India government of India that is being launched in the country in today's context, which is to meet the loss of time period during the pandemic, the home ministry said.

“On the contrary, the government has emphasised the need for assimilation in the human host genetic variations. "It is, therefore, considered a serious and imminent need to study the emerging mutations and the host genetic variations. The presence of security forces in the region was that too, amid the long gap and that too, amid the stone-throwing when the disease is transmitted from the host to the environment, take their own measures to control the disease through vaccination and treatment. For people in contact with the subject to be in the environment, it is necessary to be more vulnerable to the coronavirus disease." The home ministry said.

The Ministry of Electronics & IT of the Government of India, through the Department of Electronics and Information Technology (DEITY), has notified the National Digital Identity Mission to enhance the number of digital India citizens. The CSCs are under the Ministry of Electronics & IT of the Government of India whereas they are under the Ministry of Electronics & IT of the Government of India. The CSCs are under the Ministry of Electronics & IT of the Government of India whereas they are under the Ministry of Electronics & IT of the Government of India.

Carts in towns are too glaring to ignore. The fact that most metro cities are not even able to manage the basics of supplying essentials as they mean they need to be contained if we do not want an apocalyptic slide into chaos. Unlike earlier, this time every road is completely congested with people in despair, stocking up on essentials. Do not buy anything unnecessary. Such panic buying is also messing up the market and making people cut off the essentials of the poor.

the nationwide lockdown has been extended for another three weeks and there are signs of optimism emerging across the country, people are flocking back to the streets, businesses are reopening, and political affiliation. But there is one thing that is for sure, people are still fully aware of the risks that come with this pandemic. The National Defense Academy (NDA) at Khadakwasla, Pune, was closed due to the lockdown, but the students continued their training. Engineering colleges like the Indian Institute of Technology (IIT) in Kanpur and the Indian Institute of Science in Bangalore were closed. The University of Mumbai, University of Pune, and the University of Delhi were also closed. The monsoon season is crucial for researchers in India, as it provides the ideal conditions for conducting experiments. Researchers across the country are working around the clock to understand the mechanics of the virus and develop effective treatments.

Pushkar Patil

At the same time, the world is facing a health crisis that is unprecedented in scale and scope. The COVID-19 pandemic has brought to light the need for greater cooperation and coordination among countries and organizations. The World Health Organization (WHO) has called for a coordinated global response to the pandemic, and many countries have responded by implementing lockdowns, quarantine measures, and travel restrictions. The pandemic has also underscored the importance of strong healthcare systems and robust public health infrastructure. In this context, the role of scientists and researchers has become more critical than ever before. They are working tirelessly to develop vaccines, treatments, and other interventions to combat the virus.

The scientific community has a responsibility to drive the narrative in a way that is clear and accessible to the public. This includes providing accurate information about the virus and its transmission, as well as promoting behaviors that can help prevent its spread. It also means advocating for policies that prioritize the health and well-being of all people, regardless of their background or circumstances. In short, the scientific community has a role to play in the fight against COVID-19, and they must do so with integrity and commitment.

Despite the challenges and uncertainties of the pandemic, the scientific community remains dedicated to its mission of advancing knowledge and improving the health and well-being of all people. The past year has been filled with incredible achievements, as well as setbacks and disappointments. But the results of this ongoing Pandemic are clear: a safer world for all.

For this report, the author would like to acknowledge the contributions of the following individuals: Dr. Pushkar Patil, Dr. Prashanth Muralidhar, and Dr. Srikanta Das. Their insights and expertise have been invaluable in shaping the narrative of this article.

The science of pandemics and the role of the scientific community in shaping public health policies is a complex and multifaceted issue. The rapid pace of scientific discovery and the need for effective communication and collaboration are two key factors that will determine the outcome of this crisis. As the world continues to grapple with COVID-19, it is important to remember that we are all in this together, and that the scientific community has a role to play in driving the narrative of this pandemic in a way that is clear, accessible, and effective.

The scientific community has a responsibility to the future, and to the health and well-being of all people. It is up to us to ensure that the lessons learned from this pandemic are used to improve the world for all. As the saying goes: "The world is a book, and those who do not travel read only one page."
Sidelined by pandemic, Trump campaign turns to digital shows

Many lockdowns ease but Russia, UK still struggling

Home From the United States Europe to Asia, the easing of lockdowns and the measured return to normalcy is beginning to offer a glimmer of hope that the world is starting to emerge from the global health crisis. But for all the optimism, there are still many millions of people who remain stranded in their homes or are forced to continue working from home.

Near 1.7 million people visited beaches and parks in the United States, the United Kingdom, and other countries this weekend, but many were still hesitant to venture out for fear of the virus. The pandemic has had a profound impact on the economy, with millions of people losing their jobs and businesses struggling to survive.

In the UK, the government has announced plans to gradually ease lockdown measures, but officials have stressed that people must continue to follow guidelines to prevent a second wave of infections. In the US, some states have already started to reopen businesses, but others have delayed their plans.

The global economic impact of the pandemic is estimated to be in the trillions of dollars, with many countries facing a severe recession. The International Monetary Fund has forecasted a global GDP contraction of 3.4% this year, and some economists predict even larger declines.

Despite the challenges, there are signs of hope on the horizon. The development of vaccines and other treatments is advancing rapidly, and new therapies are being tested in trials.

As the world continues to grapple with the pandemic, it is clear that the fight is far from over. But with increased collaboration and shared knowledge, there is hope that we can emerge from this crisis stronger and more united than ever before.
**Dear Reader,**

Covid-19 has hit India's foreign currency earnings from tea exports. Experts say the coronavirus pandemic has significantly affected the earnings from tea exports, which are an important source of foreign exchange for the country.

Indian tea exports have been hit hard due to the pandemic, as countries around the world have imposed lockdowns and restrictions to contain the spread of the virus. This has led to a decrease in demand for tea worldwide.

The Indian tea industry has been facing challenges for some time due to the rise in production costs and a decline in demand. The coronavirus pandemic has only added to these problems.

The government has taken measures to support the tea industry, such as providing financial assistance to tea growers and encouraging exports. However, these measures may not be enough to offset the impact of the pandemic on tea exports.

The government needs to take steps to diversify the tea industry's revenue streams and reduce dependence on exports. This could include promoting tea tourism and value addition to increase the value of tea.

The government should also work with the industry to develop new markets and products to meet changing consumer preferences.

In conclusion, the impact of the coronavirus pandemic on tea exports is likely to be long-term. The industry needs to be prepared for challenges and work towards sustainable growth.

**Sincerely,**

Mumbai, he'd consume food from a lunchbox. Lunchbox lunches.

Times disappointing. But the fun of expectations something new every time opened it with excitement while he was still a tiny to a lady homemaker who'd connected his tastebuds and his desires. The humble lunchbox disappeared from our lives. When I came to India, I was pleasantly surprised to see many of my Indian colleagues carrying a personal lunchbox to office, taking it to the canteen during the lunch-hour, heating the food in the microwave oven and serving themselves. I would often be reminded of the taste of rice and dal, pickles and chutneys, and the secret recipes that it made me savor.

Like many of our colleagues living in Korea, I used to take my lunch box back home and cook it. The kitchen was a place where creativity, imagination, and love for food was expressed. The lunchbox is a symbol of the connection between the home and the workplace, representing the love and care that goes into preparing meals for those who are far away.

The humble lunchbox is a part of the cultural fabric of India, and it is a symbol of the many ways in which we express our love and care for each other. It is a reminder of the importance of slowing down and enjoying the simple pleasures of life. It is a reminder of the importance of connecting with our families and friends, and of the importance of valuing the work that goes into preparing meals for those we love.

Upgrade your skills and acumen

Even though lockdown 3.0 has come with new restrictions and allowances, but as we prepare ourselves to enter a new normal past complete freedom from lockdown, one must make all the efforts to make the most of this opportunity. Workshops and mentorship have always been an important tool for people who wish to help you in your line of work or study. Further, workshops and webinars offer unique opportunities to engage with experts in various fields.

STRIKE A BALANCE

Stay focussed on positivity and take good care of your health while you prepare for a reformed world when the lockdown is balanced, says Shahid Qureshi

On one hand, friendships and your extended family through various forms of digital communication. The lockdown has made me realize just how essential it is for me to communicate with loved ones, engage in conversations that keep us connected, and form meaningful interactions.

With respect to work, office teams can start focusing on individual areas of self-development. Share and discuss your skill-building exercises every team call and learn from each other. This enhances the overall culture of the business. candies. The lockdown has made me realize just how essential it is for me to communicate with loved ones, engage in conversations that keep us connected, and form meaningful interactions.

"Yes, I am picky when it comes to films. I try to be part of films that I would want to watch. I also try to pick different roles that I have done. I started with 1920 and I am very fond of that."

Actresses in the industry for years don't get a chance to do what I got to do in my career — Adhuna Akhtar

RAHUL VIKRAM SINGH, who worked in the industry, was director, scorer, composer, and is a music director in a film. He is doing a great job for his forthcoming film, Paul Calling, to look the part of a soldier.

"This is the major part of the preparation for a character, and obviously portraying an Indian army soldier is an extra responsibility."

Directed by Aaryan Saheb, the story of the story of the Indian soldier's family has sacrificed his life in the line of duty. It also stars Sharman Joshi.

Chris joins Instagram

Captain America actor CHRIS EVANS has joined Instagram. Evans shared that he is taking part in an "All in Challenge," launched to help raise money to fight hunger during the COVID-19 pandemic.

In his debut status, Evans says, "A virtual hangout with me and my close friend, " where the Avengers co-stars Chris Evans and Chris Hemsworth are "returning to his Avengers co-stars Chris Evans and Chris Hemsworth for a virtual hangout with me and my closest friend."

That's it! Chris Evans.

We lost two great Bollywood actresses this week. One of them brought back memories of a brilliant actress. Irrfan Khan played the lead in a film by the same name — The Lunchbox. The film, like many other offices give us the city of Mumbai, had a food cooked on his desk by the famous drab, but he was a very humble actor who brought his hero to life. In this film, I saw charla, a humble lunchbox disappeared from our lives. When I came to India, I was pleasantly surprised to see many of my Indian colleagues carrying a personal lunchbox to office, taking it to the canteen during the lunch-hour, heating the food in the microwave oven and serving themselves. I would often be reminded of the taste of rice and dal, pickles and chutneys, and the secret recipes that it made me savor.

Like many of our colleagues living in Korea, I used to take my lunch box back home and cook it. The kitchen was a place where creativity, imagination, and love for food was expressed. The lunchbox is a symbol of the connection between the home and the workplace, representing the love and care that goes into preparing meals for those we love.

The humble lunchbox is a part of the cultural fabric of India, and it is a symbol of the many ways in which we express our love and care for each other. It is a reminder of the importance of slowing down and enjoying the simple pleasures of life. It is a reminder of the importance of connecting with our families and friends, and of the importance of valuing the work that goes into preparing meals for those we love.

At last, biggest success always arrived at the theater, my first Indian film, The Lunchbox showed me how an Indian filmis prepared at home — with love — handed over to the dabbawalas, transported to local trains to fari- off, and delivered in an effi- cient manner. The journey of their food had made them so happy, and it was an amazing experience to see the joy on the faces of the dabbawalas. We had achieved something amazing by working together as a team."

ONE COULD ALSO CONSIDER COLLABORATING WITH ONGOING LOCAL AND COMMUNITY INITIATIVES, HELPING PEOPLE NEED OR SUPPORT DURING THE LOCKDOWN TO NOT ONLY BE CONDUCIVE TOWARDS PERSONAL GROWTH BUT ALSO SPREAD Positlve EMOTS.

WORKING MOME: SEASON 4

"Working mom" was recently lauded for its depiction of modern mothers who return to work while managing jobs, bosses, love and life in modern-day Toronto, starring Catherine Reitman, Dan Levy and Jain Rinaldi, the series releases on May 8 on Netflix.

JIMMY O: GOOD DIS

"Pettinette live at the Neptune Theatre in Vancouver, the film covers Jimmy's hilarious interactions with his immigrant parents, his thoughts on Matt Damon, and whether he's going to run for president. The film will premiere on May 8 on Amazon Prime Video.

DEAD TO: SEASON 2

"A first-hand narrative walking for the hit-run and drug-prone young man, "Dead to: Season 2" is an epic story of an eco-optimist who isn't quite the same beast. Streaming Amazon Prime Video.

NEW DELHI, MARCH 14, 2020

"I am not a born composer: Shreya SHREYA GHOSHAL’s singing is always on point. But not many know that she's a born actor. Just before the Coronavirus lockdown in India in March, she had unveiled a single आँख मेरे मुंदिया. I was thinking of releasing it later but I was not sure how long the lockdown would go on. So I just released it on the music channel. It’s composed by me and my broth- er."

She wants to use the lockdown days to create more content for her YouTube channel. "I am trying to bring in some stuff to the screen while the lockdown song. I am a 'born composer’ she added.

June 1 Jeong talks about how actor IRFAN KHAN’S The Lunchbox captures emotions and childhoods of Indian film

Lunchbox captures childhood memories and the bonding that exist between loved ones back home and our roots here. While watching the film, we were also reminded of our heads on one back home and our parents. We could understand the ethos and the bonding that exist in Indian families. We also get to know more about the interesting Indian cuisine and its range of flavours.

South Korea and India share similar values and fun. The only difference is, the colours, that lined the walls of the box to office, taking it to the cafe- teria during the lunch-hour, heat- ing the food in the microwave oven and serving themselves. We were also reminded of our heads on one back home and our parents. We could understand the ethos and the bonding that exist in Indian families. We also get to know more about the interesting Indian cuisine and its range of flavours.

One could also consider collaborating with ongoing local and community initiatives, helping people need or support during the lockdown to not only be conducive towards personal growth but also spread positive emotions around them taught me how much more there is to life, and I learned to respect, understand, and cherish the lives of others. What a learning experience it was!

I would strongly advise anyone who has ever been told to stop and think about our lives at any point in time, to consider this film and watch it. It is a reminder that there is always something new to learn, and that we should always be open to learning and growing.

The film will remain etched in my memory. What The Lunchbox taught me is that life lessons come in many different forms.

One of the most amazing films I had watched and certainly the best Bollywood one. I also introduced it to my wife when she joined me in Delhi. The film was a hit at the box office, and it was released several months and several of our friends."

As people stay at home, nature is flourishing, although its presence is often subtle. This is the time to introspect, change our habits and continue the lockdown once the lockdown is lifted, says ZAKIA BANOO

Dig, plant, breathe
In chaotic times, families discover that gardening is a refuge that garners them hope and peace.

Waldrop suggested her skeletal husband, who initially wasn't interested in doing much, had issues with the heat and mosquitoes. But going out to the garden to tend to the plants, Waldrop believes, has a therapeutic effect. The young children add a little energy to the yard, and together they're able to spend time together and enjoy little activities that they can do.

There's a premium on alleviating stress here. "When it comes to food growing," said Richard Winkler, who lives with his wife near Kansas City, Kansas, who hopes the victory garden can bring health and well-being to his family and neighbors. "I've got a dog in the kitchen garden near her back- yard, and I've got to get the kids in the dirt. But we really try to do it the same way. I don't want their young plants and things growing so fast."

Waldrop's 12-year-old granddaughter saw a planting of basil flowers that had "kind of dried out" and asked her to "water that plant."

"I told her that you don't water flowers," said Waldrop. "I told her that how you give your grapes..."

"It also helps me look after things and set up things that they need," said Waldrop. "I'm finding that I'm doing a lot of what they need..."

Waldrop's 12-year-old granddaughter almost died of heat exhaustion a few years ago. "I told her that you don't water flowers," said Waldrop. "I told her that how you give your grapes..."

"It also helps me look after things and set up things that they need," said Waldrop. "I'm finding that I'm doing a lot of what they need..."

No to negativity
While the virus might be a vicious culprit, the accumulated toxic matter in our body, which provides a suitable breeding ground for it to mutate, said Dr. Brij Bhanpal, founder and group chair of the Brij Bhanpal Foundation.

"According to World Health Organization (WHO), health is defined as the absence of illness or disease, not merely the absence of disease or infirmity. It is a state of complete physical, mental, and social well-being. This definition was introduced by the WHO in 1948, to emphasize that health is not merely the absence of disease, but a state of complete physical, mental, and social well-being..." said Dr. Brij Bhanpal.
