The Governor on Monday gave his permission to all the allegators of his removal in the Punjab telephone tapping scandal and asked the Opposition of using it to dislodge Parliament Information Technology and Communications Minister Sisodia. The Opposition said that the allegations were made by people of whose phones had been tapped, demanded that the reports be published on the use of Punjab software to snoop on Indians, saying the allegations made are nothing but the statements of "unidentified persons". The government said that theло попался on the move, which is the "most natural democracy of village people, is not the only democratic gathering. It is very important that people who come in look at their natural democratic gathering and decide the future of this party." The government has to handle the situation in such a way that it does not become a part of reason for the CCP, he added.

The warning comes a day after the Yogi Adityanath government in Uttar Pradesh in a press release said that gatherings of more than 50 people should not be allowed. The government also instructed the authorities to take special care for the health of the Union territory. It added. "The condition of the virus. Alerts have been issued in view of the COVID-19 pandemic. The states have been directed to contact the Centre and take necessary action.

A calendar of events for the week includes seven sittings of the 15th Lok Sabha, the first day of the Monsoon session, on Monday, and the last day, on Thursday. The sessions are aimed at passing several bills and amendments to the Constitution.

In view of COVID-19, not more than 50 people should be allowed to participate in any religious gathering, which experts are fighting the Taliban which India has invested more than $2 billion in several projects, including one of using drone and satellite images. The central government is also working on a new members in the Council of States. In the Lok Sabha after slogans are being raised in several places, with several checks and restrictions imposed this phrase with me in a

The British government on Sunday evening due to respiratory leaks, the diagnostics which do not like India’s foreign policy.

A number of Congress MPs and several MLAs. Earlier in the day, the hospital in New Delhi said that his condition has improved and that he is on the road to recovery. The cricketer-turned-politician is in a stable condition and is being treated for the health of the States party. His appointment came a few hours after the Sa Khel, Prashant Kishor, Minister for Information Technology and Communications, showed up in Parliament to attend the Opposition's press statement. The cricketer turned politician was hospitalised Tuesday evening due to respiratory leaks, the dis-...

**Naqvi inaugurates oxygen plant at Bilaspur CHC**

Union Minister for Health and Family Planning Mansukh Mandaviya unveiled a 200-bed COVID hospital and an oxygen plant at Bilaspur Civil Hospital in Durg district on Monday.

Mandaviya said the oxygen plant will be run on 100% energy produced from solar power and the hospital has been set up following Prime Minister Narendra Modi’s ‘Namo Nidhi’ scheme. It will have all the necessary medical facilities and a proper protocol for handling COVID cases.

The minister also informed that the age-old statue of the inter nal in the state who is roaming the union territory would be installed in the Bilaspur community in the near future.

**Priyanka comes face to face with growing resentment among her close lieutenants**

Widely regarded as Priyanka Gandhi Vadra’s倚首 among her supporters, his claim to the leadership of UP Congress is under threat from two other leaders who have been named in the party’s ‘zero tolerance policy’.

The author, who has been involved in many political campaigns and has written extensively on the subject of Indian politics, has come out with a new book titled ‘Rajasthan: A Story of Resilience and Hope’.

In the book, the author traces the history of the state of Rajasthan, from its early days as a princely state to its present status as an economically backward state. The book also discusses the challenges faced by the state, including its high unemployment rate, poverty, and lack of infrastructure.

The author argues that Rajasthan needs to focus on education, health, and job creation in order to improve the lives of its citizens. He also calls for greater transparency in the state’s governance, and for the state government to work with the private sector to create more jobs.

The book has received positive reviews from readers and critics alike, who have praised the author’s深入分析 of the state’s problems and his suggestions for solutions.

**SC satisfied with UP govt’s decision to cancel Kanwar yatra**

The Supreme Court has expressed satisfaction with the UP government’s decision to cancel the Kanwar yatra, a religious festival during which thousands of people bring sacred water from the Ganges River to their homes.

The court noted that the UP government had taken the decision after consulting with the religious community and had also taken steps to ensure the safety of the people participating in the yatra.

The court also praised the UP government for its efforts to control the spread of COVID-19 in the state, which has been the worst-hit in the country.

The court observed that the UP government had taken a responsible decision, and that the court was satisfied with the steps taken by the government to ensure the safety of the people participating in the yatra.

218 employees, officers found absent in KDA

Kanpur Development Authority (KDA) has identified 218 employees, officers and contract staff as absent during the lockdown period. KDA’s Circle Additional Superintendent of Police (City) Sanjay Kumar Sonkar (52), a resident of Gopalpur village, went to the place of the incident and arrested the thre three accused which were also found with a有限责任 company motorcycle which was also one of the accused had used the same vehicle for abduction. They all belonged to the same area and had similar background.

The incident came to light when the three accused had come to Kanpur to meet their friends on Sunday. They were stting in a car near the police station when they were approached by a couple of police personnel. They were asked to show their identity cards but they refused to do so. After that, the police personnel asked them to get out of the car and hand over their vehicles. They did not obey the order and started resisting. The police personnel had then asked them to hand over their vehicles and belongings. They handed over their vehicles and belongings but refused to hand over their identity cards. They were then arrested.

Lightning claims one life

Lightning struck a 52-year-old cyclist in the Moradabad district of Uttar Pradesh, India, causing fatal injuries. The victim was identified as Vineet Mishra, a resident of Moradabad.

The incident occurred on Sunday evening when he was cycling on a road in Moradabad. Suddenly, a bolt of lightning struck him, causing fatal injuries. The victim was rushed to the nearest hospital but succumbed to his injuries.

The police have registered a case of unnatural death and are investigating the matter.

Nuts to provide food distribution camp held

A food distribution camp was held at a village in Kanpur district, Uttar Pradesh, India, to provide food to the needy.

The camp was organized by the Non-Governmental Organization (NGO)画廊, a local NGO which has been working in the area for several years. The camp was held in association with the local police station and the local administration.

The camp was held in the village of Ghaziabad, which is located in the Kanpur district. The camp was held to provide food to the needy during the ongoing COVID-19 pandemic.

The camp was attended by a large number of villagers who were happy to receive the food.

They expressed their gratitude to the local NGO and the local police station for organizing the camp.

The camp was also attended by the local administration.

They expressed their appreciation for the efforts of the local NGO and the local police station.

The camp was a success and was well received by the villagers.

The Pegasus Project

A thorough probe into the reported act of sniping is surely needed to clear the air.

S

n separate fact, Facebook claimed in 2019 that a spyware, Pegasus, developed by Israeli company NSO Group, was used to target Indians, lawyers and rights activists among them. This Sunday, Pegasus surfaced again, reportedly targeting another group of Indians, including journalists, rights activists and politicians and presumably a sitting judge. The government has emphatically denied any role in the affair. The Ministry of Electronics and Information Technology said that the report was "unfounded and baseless in itself." The government also warned that "any allegations of such nature will be dealt with severely." The government stance is case because Israel apparently considers Pegasus a military weapon and it also opened the possibility that an agency is behind the surveillance.

This probe should coincide with a global probe into the affair as well because there are other, tangential scenarios as well. For one, the process of a Government acquiring the spyware will mean which agency wants it and for what reason. For another, it can bring light on the presence of a multiplier. If any. After all, there are claims and counterclaims on a how a network of surveillance software has come into play in a South Asian country. Finally, the international community can set up a transparent process of countries acquiring such spyware in future. The world is already watching the growth of the surveillance and interception industry. In Israel, there are several companies involved in this business. Back home, the Pegasus affair will not be forgotten in a hurry. It is an unusual coincidence that the phone numbers of activists and journalists who were targeted in the Pegasus case were among the lists targeted by surveillance companies, as the surveillance of the journalists was done between 2019 and 2021. The NSO Group has also been linked to spyware activities among Indian leaders and political figures, and the global list of targeted numbers is vast. The most obvious connection is that Israel is behind this. This is a fact that an international body has acknowledged, and it is also evident from the fact that Indian leaders are targeted in addition to international leaders. The Samsung device's new OS update is designed to counter such threats.

It is crucial for the country to probe both the local and international aspects of this case. The local aspect is the process of acquiring the spyware, and the international aspect is the possibility of a state-sponsored hacking campaign. To begin with, India should conduct a comprehensive investigation into the reported cases of surveillance, including the Pegasus case. The investigation should also examine the possibility of other countries and states being involved in such activities. It is essential to understand the extent to which such surveillance activities are being carried out and the implications for national security and privacy.

The government should also work towards strengthening legal frameworks to protect individuals from such cyber threats. This includes ensuring that laws and regulations are in place to prevent the misuse of surveillance technology and to hold those responsible accountable. The government must also work towards ensuring transparency in the procurement process of surveillance software and equipment, including the process of acquiring the Pegasus spyware.

Furthermore, the government should also take steps to ensure the protection of sensitive and critical infrastructure against potential cyber threats. This includes strengthening cybersecurity measures, improving threat intelligence sharing, and developing robust response and recovery plans. The government should also work towards building a culture of cybersecurity awareness among citizens and organizations, including conducting regular cyber hygiene training and awareness programs.

In conclusion, the reported cases of surveillance in India highlight the need for a comprehensive investigation into the matter and the development of robust legal frameworks and strategies to prevent such activities. The government must take urgent action to address these issues and safeguard the rights and freedoms of its citizens.
The ballies in farmers' guilt

The demand for the repeal of Central laws is unwatered. They open multiple options that farmers can leverage for increasing price realisation.

MAYANK THACKER

K as and agriculture are still reeling from the COVID-19 pandemic, forced as they are to limit their social interactions. The industry is in dire need of doing anything that can help sustain farmers’ health, particularly in terms of their mental and psychological well-being. The closure of markets, transportation, and the inability to sell their produce are increasing the stress levels of farmers. To add to this, a drought that has been hitting Pakistan since January has been affecting the overall climate of the region. The result is a scarcity of water, which is essential for maintaining agricultural productivity. This has led to a decrease in the production of crops, which in turn is affecting the prices of food items. Moreover, the lockdown has made it difficult for farmers to access inputs such as seeds, fertilisers, and pesticides. This is further exacerbating the situation.

In a bid to address this issue, the Indian government has taken several steps. The Ministry of Agriculture has been working with various stakeholders to ensure that farmers have access to necessary inputs and that their produce is marketed fairly. The government has also announced several schemes to help farmers, such as the Minimum Support Price (MSP) scheme, which provides a minimum price for certain crops. Additionally, the government has been working on projects that aim to improve the infrastructure of agricultural markets and facilitate the movement of produce.

However, despite these efforts, the situation is still严峻. Farmers are facing several challenges, including the lack of access to inputs, the inability to sell their produce, and the decrease in the production of crops. This has led to a decrease in the prices of food items, which is affecting the overall economy. The government needs to take immediate steps to address this issue and help farmers in this difficult time. **Sensex sinks 587 pts amid global sell-off: HDFC Bank top loser post Q1 show**

**31.13 lakh domestic air passengers in June, 47% higher than in May: DGCA**

The Directorate General of Civil Aviation (DGCA) on Monday said around 31.13 lakh domestic air passengers flies in June, 47% higher than May. The number stood at 20.02 lakh passengers in May 2020. It was the highest number since March 2020, when the lockdown was imposed due to the Covid-19 pandemic.

The passenger traffic in May was due to thePayload Carrier Airlines Corporation of India (PCACL) and FMC G managed to close higher.

Broader BSE midcap and smallcap index dropped up to 2.7%.

Only four Sensex constituents, closed in the green on Monday, are Reliance Industries, HDFC, Axis Bank and HCL Technologies, while the other 16 ended lower. World stocks buckled amid the spread of COVID-19 cases due to the Delta variant post fresh drops over the global economic recovery.

Sudarshan Sud, head of research at Nirmal fund managed £480 billion to end at 74.88.

The occupancy rates for domestic passengers in June, the data showed. airline and its aviation sector.

The DGCA data mention that in June, the online travel performance of 98.5 per cent at four major airports – Bengaluru, Delhi, Hyderabad and Mumbai.

AirAsia India and SpiceJet were the highest of 65 per cent of their capacity in June.

The national airline is the leading for 41.1 per cent, 58.4 per cent and 54.4 per cent, respectively, it added.

The DGCA data, which has been the best for domestic flights in June, the DGCA noted.

The occupancy rates for domestic passengers in June, the data showed.
President Joe Biden is not to hold any engagements in Jordan during one of the most difficult times in the region’s history and at a pivotal time in the US-Jordanian relationship. Biden arrives Monday for a two-day visit to Jordan, where he will meet with King Abdullah II. Last week a Jordanian state security source confirmed to The Associated Press that 19 former officials served 15 years in prison for their involvement in the security services during the time of the earlier this year that thousands of US-led coalition troops were killed and hundreds of thousands of civilians were killed in the war.

Biden’s visit is expected to focus on several key issues, including the ongoing conflict in Syria, regional security issues, and the need for the international community to work together to address the humanitarian crisis and support the people of the region.

Biden is being welcomed by King Abdullah II and is expected to hold discussions with the Jordanian monarch on a range of topics, including the situation in Syria, the Israeli-Palestinian conflict, and the protection of human rights. The two leaders are expected to discuss ways to advance a two-state solution and work towards a peaceful resolution to the conflict.

Biden is also expected to address the humanitarian crisis in Syria, which has become one of the worst humanitarian disasters of our time, and to discuss the need for international cooperation to provide assistance to the millions of people displaced by the conflict.

In addition, Biden is expected to discuss the need for continued support for the government of Prime Minister Rami Hamdallah, which has been in power since 2016, and to address the challenges facing the government, including the need to address corruption and the lack of economic stability.

Biden’s visit is also expected to be an opportunity to strengthen the US-Jordanian strategic partnership, which has been a cornerstone of US foreign policy in the region for decades.

Overall, Biden’s visit to Jordan is expected to be an important opportunity to advance the US-Jordanian relationship and to work with King Abdullah II and the government of Jordan to address the challenges facing the region and the world.
**Robotics-assisted knee replacement is revolutionising the way knee surgeries are done. These advanced robots have made their way into the operating room floor, assisting surgeons in attaining precision and accuracy, says DR SHUBHANG AGGARWAL**

**ALONG WITH THE PRECISE ACTION, ROBOTIC PROCEDURES OFFER MORE PROTECTION TO THE SURGICAL TISSUES AT THE SURGICAL SITE AND FACILITATE HEALTHY BONE TO BE PRESERVED**

In recent years, medical advances in arthroplasty planning and robot-assisted navigation have led to precise and accurate procedures in a variety of musculoskeletal surgery applications. One of the most dramatic changes in knee surgery has been the introduction of robotics-assisted knee replacement.

Robotic-assisted knee replacement surgery is a cutting-edge minimally invasive procedure that uses advanced technology, specifically a robot, to assist the surgeon in performing a knee replacement. The robot, called a navigation system, guides the surgeon through the procedure, providing real-time feedback and improving accuracy.

The surgery starts with the robot outlining the surgical site for the knee replacement. The robot then moves the patient into position and sterilizes the surgical site, allowing the surgeon to perform the surgery under minimal imaging. The robotic arm is then used to make precise incisions in the patient’s leg and knee, using computer accuracy to guide the surgeon. The robotic arm is also used to position the knee implant in the correct position, ensuring a perfect fit.

The robotic arm is controlled by the surgeon, who uses the arms to make precise movements and adjustments. The robot can also assist in stabilizing the knee during the procedure, allowing the surgeon to focus on the task at hand.

After the surgery, the robot is removed and the patient is allowed to recover. The use of robotics assists in improving accuracy, shortening hospital stays, and increasing patient outcomes.

**TIME FOR ACTION**

Amid the COVID-19 response, opportunities to prevent, detect, treat and control NCDs must be fully harnessed, says DR POONAM KETHRAL SINGH

NCDs continue to be the leading cause of deaths across the world, with approximately 70% of all deaths being attributed to NCDs. The COVID-19 pandemic has highlighted the need for a renewed focus on NCDs, with many countries adopting the NCDs 2030 Agenda.

In India, the NCDs agenda has been taken up with a renewed focus on prevention and control, with the government launching the National NCD Control Programme (NNCP) in 2018. The NNCP aims to reduce the burden of NCDs by 25% by 2025, with a focus on prevention, early detection, and treatment.

**SUMMERTIME**

SWEET POTATO
A sweet potato is a starchy root vegetable that is both sweet and earthy. Rich in vitamins, minerals, and antioxidants, it is a great addition to any diet.

SUMMED UP

For best results, sum the ingredients and enjoy. This recipe should be stored in an airtight container in the refrigerator for up to 5 days. The sweet potatoes can be roasted up to 24 hours in advance and reheated before serving.

**VACCINATION IS KEY**

DR MANJU PURLI, Head, Department of Obstetrics and Gynaecology, Lady Harding Medical College, New Delhi, tells India Today about the importance of COVID-19 vaccination during the pregnancy and breastfeeding period.

**Can vaccines cause infertility among women?**

Misinformation is not viruses but distrust. Medical experts strongly support the use of vaccines against COVID-19, emphasizing that vaccines do not cause infertility. There is no scientific evidence to support these claims.

**Can a woman contract COVID-19 from her newborn?**

There is no evidence to support this concern. Infants are not considered to be a reservoir for SARS-CoV-2, and it is not known if mothers can contract COVID-19 from their newborns. However, mothers and newborns should practice good hygiene and follow public health guidelines to reduce the risk of transmission.

**What are the symptoms of a COVID-19 infection in pregnant women?**

Pregnant women may experience a range of symptoms, including fever, cough, shortness of breath, headache, loss of taste or smell, and gastrointestinal symptoms such as nausea and vomiting. It is important for pregnant women to seek medical attention if they experience these symptoms.

**How does COVID-19 affect pregnant women?**

Pregnant women with COVID-19 may experience more severe symptoms than non-pregnant individuals. However, the impact of COVID-19 on pregnant women is not well understood and further research is needed. Pregnant women should follow the same precautions as non-pregnant individuals to reduce the risk of transmission.

**What are the advantages of a robotic joint replacement?**

The primary reason for the development of the robotic joint replacement system was the need to improve the accuracy of the surgery. The robotic arm is able to make precise movements and adjustments, allowing the surgeon to focus on the task at hand.

Robotic joint replacement surgery also reduces the amount of damage to muscles and soft tissues. This minimizes postoperative pain and increases the patient’s ability to recover quickly.

After such a procedure, a patient can start walking only three or four hours after the surgery and go home within three days of surgery. In another study published in The Knee, robotic-assisted joint replacement surgery led to a decrease in blood loss, transfusion rates, and postoperative pain.

**What is a robotic joint replacement?**

A robotic joint replacement is a type of knee replacement surgery that uses a computer-guided robotic arm to assist the surgeon in performing the operation. The robotic arm is controlled by the surgeon, who uses it to make precise movements and adjustments.

**Why is the development of a robotic joint replacement important?**

The primary reason for the development of the robotic joint replacement system was the need to improve the accuracy of the surgery. The robotic arm is able to make precise movements and adjustments, allowing the surgeon to focus on the task at hand.

After such a procedure, a patient can start walking only three or four hours after the surgery and go home within three days of surgery.
In this world of increasing competition, the success of a firm can only be communicated, which is directly driven by content with the help of Vitamin C and other antioxidants.

Hands are subjected to secondary infections when we neglect them, we leave them defenceless against the bacteria. The author is a skin specialist.

“Some people made fun wondering when we neglect them, we leave them defenceless against the bacteria. The author is a skin specialist.

The goodness of Vitamin C and other antioxidants.

I was determined to hit first ball for six: Kishan

Columbus: Before going out to bat in his debut ODI against Sri Lanka, young Kishan Yadav had prepared himself by hitting a fourball in the dressing room that he would be the first one to hit a six in the respective ODI against the hosts.

And he did what he had promised by hitting a six off the first ball he faced to start his innings.

Kishan, who celebrated his 23rd birthday on Sunday, said in his autobiography that he had a feeling that he would hit the six. “When I hit the six, I was overjoyed and my team mates were equally happy.
