Minister appreciated the judiciary for setting up a system of judicial audit to keep an eye on the number of pending cases. But said that if a judge is not doing justice to the people of the country, he should be removed. I have said it before and I will say it again, he told the CJI.

Minister also said that the judiciary has become a challenge and it has to be handled with urgency. "We need to look after the judiciary. We need to support the judiciary," he said. The Minister also said that the judiciary is an institution that is inherent to the bar that it has to be treated with respect and dignity.

Minister also said that the judiciary is responsible for setting an example in the country. "We need to look after the judiciary and treat them with dignity. We need to respect women colleagues and he would support the bar council in all possible ways," he said.

Minister also said that the judiciary is also a special occasion as it takes place on October 2. He said that the Prime Minister will hold a special event at the Prime Minister's house on October 2. He also said that the Prime Minister will hold a special event at the Prime Minister's house on October 2.

**APMDC mining ops commence in MP, Jharkhand, C’garh**

APMDC mining ops commenced in the auspices of the Ministry of Mines and IIED in Jharkhand under the Chairmanship of the Chief Minister of Jharkhand. The inauguration ceremony was held at the State Secretariat in Ranchi on the occasion of the 72nd Independence Day. The inauguration was attended by the Chief Minister of Jharkhand, the Governor of Jharkhand, and other dignitaries.

**Governor compliments medalists at Paralympics**

Andhra Pradesh Governor Biswabhusan Harichandan, on the occasion of the closing ceremony of the Tokyo Paralympic Games, congratulated the Indian Paralympic medalists. The Governor said that the Paralympic Games are a testament to the indomitable spirit of the athletes, who despite facing physical challenges, have achieved remarkable success.

**Man rapes 10-year-old daughter, close relative**

In a shocking incident, a 25-year-old man from Andhra Pradesh was arrested for raping his 10-year-old daughter. The incident came to light when the girl’s mother filed a complaint with the police. The accused is a close relative of the victim.

**Governor recalls Pak Rebellion**

Governor Biswabhusan Harichandan recalled the historic event of the Pak Rebellion (1946-1948) and termed it a significant milestone in the history of the country. He spoke about the bravery and sacrifice of the people who fought against the British rulers for their independence.

**APMDC mining ops commence in MP, Jharkhand, C’garh**

The APMDC mining ops have commenced in the mines of Jharkhand. The operations are being carried out under the guidance of the Chief Minister of Jharkhand. The inauguration ceremony was attended by the Chief Minister, the Governor, and other state officials. The mines are expected to generate significant revenue for the state.

Climate Change is the Greatest Risk in Cities

Regrettable policies and an over-inflated real estate market have made residential rentals an unviable proposition for businesses, in India, write DHAVAL MONANI & PRASANNA SRIRAMAN, as they discuss the challenges in the affordable rental housing scheme in the first part of four part series

SHELTER SOLUTIONS FOR CONSTRUCTION MIGRANT LABOUR

Update policies to build infrastructure

Climate resilient development requires climate considerations to be mainstreamed into planning. Strategies must be integrated into building bye-laws & national construction codes to ensure large scale adoption, writes RUCHIE KOTARI

The United Nations
Strategic Environmental Report on Climate (IPCC) recently released its first part in its sixth assessment report, Climate Change 2021: The Physical Science Basis. The IPCC report warns that the global average temperature may rise by 1.8°C above the pre-industrial levels within the next 20 years. The IPCC report also predicts that India will see a rise in extreme weather events such as floods, cyclones and heatwaves over the years.

Each extreme weather event heavily impacts the infrastructure and building industry. The floods are often accompanied by freezing storms for developers and owners alike. Natural disasters cause a loss of 2% GDP every year in India. An increasing number of extreme events over the last decade has resulted in improved building codes and construction standards over the years. The government has taken steps to ensure high resilience levels across the country to tackle to mitigate the impacts of disasters before the event occurs. This will reduce our vulnerability to the impacts of disasters on property, livelihoods and food security. The government has taken steps to ensure high resilience levels across the country to tackle to mitigate the impacts of disasters before the event occurs.

Climate resilience is the ability to prepare, to recover, from, and adapt to the impacts of climate change events. Climate resilience addresses adaptation, mitigation and management of climate change impacts.

Majority of the efforts to address climate change through green buildings is focused on reducing greenhouse gas (GHG) emissions. Measures to reduce building energy associated with transportation, home and community engagement and coordination and long term adaptability. Similar to green building rating systems, these frameworks include strategies addressing transportation, energy, water, waste, transportation, and waste and material efficiency. Several frameworks have been established to promote sustainable, low carbon, resilient infrastructure and buildings. Frameworks such as Green Building Councils, the World Green Building Council, the International Cost Integration Framework, or for the recently released Sustainable Infrastructure Rating System, the BREEAM Rating System, Strategies for Multi-Functional Building Strategies – ‘Green Building Guidelines’ often include strategies to address vulnerabilities in urban areas and prepare for and adapt to the impacts of climate change. The policies of climate change impacts are addressed to be a priority to governments and city planning officials.

The policies of climate change impacts are addressed to be a priority to governments and city planning officials. It is important that the government and city planning officials take steps to ensure the safety and security of residents from the new climate. An understanding of the infrastructure and construction phases will reduce additional costs and help us avoid expensive retrofitting later. It will also mean to take steps to integrate climate resilient infrastructure and buildings. In the urban areas, building a sustainable infrastructure is crucial to reduce climate impacts. This includes necessary capacity building and training, improving engagement and coordination between all stakeholders, market mobilization and providing financial support to build climate-proof infrastructure and buildings. The world needs to act collectively to meet climate change challenges.
While bilateral exigencies demand diplomatic attention, it is essential for India to support Afghanistan as its strategic & developmental partner, writes CHAYANIKA SAXENA

The recent spate of events, which anticipate other things, has cemented an opinion on India's part to talk to the Taliban, has demonstrated New Delhi's keenness on adapting its Afghanistancentric policies in view of the evolving situation. However, its foremost priority must be to ensure the safety and well-being of Afghans who are currently using their nemesis cross-border as a sanctuary and haven; after all, it is only the nation with a democratic, Republic system that is uniquely positioned to negotiate with a regime that is firmly on the other side of the fence from the (unfounded) claims of democracy.

India, too is alive to this possibility. As things stand today, the Indian American experience to debilitate the afghanistan is bound to reflect the crises of a nation and states on a universal scale. The Indian American experience has seen the rise of a nationalistic movement that was born on the ashes of the first world war. The Indian American experience has seen the rise of a nationalistic movement that was born on the ashes of the first world war.
The world has yet to recover from the new variants of Delta, which is keeping the Governments and citizens across the globe on their toes and looking for ways to avoid the next wave. But now, there is talk of COVID-22. The new strain might be a combination of the variants Delta, Beta and Gamma. SUPRIYA RAMESH speaks with experts to know in-depth about the new strains and whether the existing vaccines will be helpful.

— DR SANDEEP NAYAR
Senior Director and HOD, Centre for Chest and Respiratory Disease, BLK Max Super Speciality Hospital

To protect ourselves from the emerging viruses, we have to update our vaccines also. We don’t know when it might hit us but we have to gauge its severity. The vaccines might not be effective against it.

VARIANT C.1.2
The first case of the new variant called C.1.2 was identified in South Africa and is found in at least six countries. There is much lesser known about C.1.2 variants currently. However, the technical head of the World Health Organization (WHO), Dr Maria Van Kerkhove says, “I wish there was a treatment for COVID but there isn’t. The science is becoming breathless. Therefore, the WHO has regularly been discussing with South African researchers their work on variant C.1.2 in the WHO Virus Evolution Working Group in July ‘21.”

According to WHO, the sequence of C.1.2 have been reported worldwide. The first case was identified in South Africa in May this year. Currently, Delta appears dominant from variant sequences. Monitoring & assessment of variants is an ongoing & critically important to understand the evolution of this strain, in light of ongoing COVID-19 vaccine development & strategy.”

— DR ARUNESH KUMAR, CHIEF PULMONOLOGY & PARIKSHAN, Suryajiraham

He states a fact that currently, Pfizer is the most effective vaccine, which gives you around 92 per cent protection against delta if you are fully vaccinated. Vaccine’s effectiveness goes down very quickly as you go forward. In two to three months time, it goes down by 30 per cent. That is not a big risk. Whatever is coming, very soon everybody will need booster shots.

Talking about the third wave and its coverant Kumar says, “Even if the third wave comes, it won’t be as severe as the second wave and I am sure about it as our vaccination coverage has gone up from what it used to be two or three months back. There is a troubling populace that has been vaccinated as well and people are getting more aware after seeing the Delta, Delta Plus and the Gamma variants. Therefore, I think it will come but it won’t be as bad as the second wave.”

Infection Rate
Delta is currently the most transmissible Coronavirus strain and is called COVID-19 as it emerged earlier this year. It is still far-off in many parts of the world. Viruses tend to develop into variants with time and the major drawback would be when the new wave of this pandemic, Delta or Gamma variant would become more contagious.

The strain is anywhere in the world it spreads quite fast as we have seen with delta and delta plus, alpha strain, British strain, South African strain. Therefore, we have to take much time to spread. We have not yet started international flights but we are also not totally locked down and separated and people are tricking to shorter time travel.”

“Viruses are not always mutating to cause more harm but it is mutating to protect itself. Sometimes it becomes less harmful and sometimes it’s for good as well, it can be for good as well, it can be for good as well. Therefore, the viruses are going to mutate. There are a lot of variants of concern which are going to mutate very soon but there are chances it might not become severe. Emphasizing that mutation is not always bad, it can be bad as well. The term ‘COVID-22’ flared on Twitter after a Swedish immunologist mentioned it in an interview with a German newspaper, Blick on Thursday last week. It is being said that the new strain would make up for a deadlier combination of Delta, Beta and Gamma variants and it is high- ly impossible to escape the new strain.

At the moment, most of the COVID-19 cases in the world are affected by the delta variant and it is obvious that this strain will mutate very soon but there are chances it might not become severe. Emphasizing that mutation is not always bad, it can be for good as well. Dr Arunesh Kumar, Chief of Pulmonology, Parijat Hospitals, Greater Noida says, “These viruses are going to mutate. There are variants of concern – Alpha, Beta, Gamma and Delta – which we are already dealing with. The variants of concern are something we are still researching upon but aren’t sure if they are variants of concern and if they will cause harm.

VACCINATION
Vaccination and booster shots might become a norm for the rest of our lives depending on one vaccination would not suffice in the future as we only reached to a deadlier vari- ant. Early identification of the emerging variant is necessary and vaccine manufacturers would be required to fasten the process of adapting vaccines so that the world might not become severe. Therefore, the COVID-19 strain would be always under observation.

“We protect ourselves from emerging viruses, we have to update our vaccines also. We don’t know when it might hit us but we have to gauge its severity. The vaccines might not be effective against it,” says Nayar.
